

DecisionsFirst Modeler

Decision Modeling with DMN Harnesses Data-Driven Decision Making

DecisionsFirst Modeler is a collaborative decision modeling solution that makes it easy to model decisions as part of your requirements process, harnessing data-driven decision making across your organization. It is based on the Decision Model and Notation (DMN) standard to future proof your decision models and skills.

- ▶ Business processes are less complex improving flexibility and agility.
- ▶ Business rules management has structure, easing implementation and enabling scale.
- ▶ Predictive analytics projects have a framework linked to clear business results.
- ▶ Dashboards have a logical structure for going beyond information presentation to actions and recommendations.

Decision modeling is the proven approach to system design and requirements gathering that meet the needs of today's organizations to be more flexible, analytical and customer driven. Decision modeling aligns processes and data in an optimal way. Goals, processes and data come together in an easy to understand graphical interface supported by a logical structure, with clear integration points for business rules and analytics.
